

Not all MicroFibres are the same

Not all MicroFibres are the same

Microfibers are very fine fibres with a fibre thickness of less than 1 dtex (1/100th size of a human hair) that clean better than conventional fibres because of their superior mechanical action and good absorbency. This removes higher levels of dirt and grease, reduces dependency on chemicals and leaves a streak free finish.

However, microfibers are not a one-size fits all solution, the composition, thicknesses and blends are the secret to consistent high performance (up to 99.99% bacteria removal) and low friction across a variety of surfaces.

Microfibres remove and trap more dirt and bacteria from surfaces, trapping it inside and don't release back onto the surface

Benefits of Vileda Professional microfiber products:

- Externally certified bacteria removal up to 99.99% (note: removed, not killed)
- Streak free cleaning: Only small droplets left on surface after cleaning, very low tendency to re-deposit germs & dirt back to surface
- Wide range of microfiber products for all surfaces and tasks
- Microfibres in different decitex qualities (Micron and Microfiber)
- Available in single use and machine washable formats
- Colour coded (Blue, Red, Green, Yellow and white)
- Supported by extensive usage, application advice and certification
- Assurance of consistent high quality production,
- Production also in Europe

Nordic Swan certified products

Finest fibres on the market

At Vileda Professional, we have the knowledge and expertise to prove not all microfibers are the same.

Investing in quality increases hygiene

Investing in quality increases hygiene

Decades of working with end users in all sectors has resulted in Vileda Professional being recognised as experts in professional cleaning. Our offer of unique, ingenious products and services ensure the cleaning process used by our customers are the most effective, efficient and hygienic available.

Many cleaning products may look the same but in use the differences become clear. Investing in quality products ensures:

- Constant high quality: microfiber composition, split and % used is the same every order
- Constant high performance: One wipe cleaning, water absorption and dosing
- Certified bacteria removal (up to 99.99%)
- Easy to clean after use: minimised dirt traps
- Easy SOP integration
- High wash durability
- Expert support and advice

Selecting Vileda Professional cleaning utensils and implementing the correct protocols will help achieve your hygienic cleaning aims.
