

Single use microfibre products versus durables

Quality single use microfiber mop/cloths are the most hygienic.

Durables have higher cross contamination risks from extra processes

- Up to 99.99% Bacteria removal
- Dispose after single use
- No storing of products after use
- No management of laundry process
- No washing machines required on site

- Up to 99.99% bacteria removal
- Storage on trolley after use
- Moving clean/used products around site
- Management of laundry process (chemical/thermal disinfection)
- In house or external laundry required

Assessing your site, processes and overall hygiene objective is crucial to the choice between single use and durable products.
